Thanks. Let me play around with the code and see if I can resolve this.

Best,

Nick

Nick — I just forced molecular by adding ‘:99’ then removing it later.

```
71  
72 # Ensure that immunogenetr identifies low res molecular  
73 ## (seems to look for a colon; if not found string is converted to serology)  
74 row_mod <- row_data  
75 for(col in active_cols) {  
76   val <- row_mod[[col]]  
77   if(!grepl(":", val)) {  
78     row_mod[[col]] <- paste0(val, ":99")  
79   }  
80 }  
81  
82 # Create GL String  
83 gl_list <- immunogenetr::HLA_columns_to_GLstring(  
84   data = row_mod,  
85   HLA_typing_columns = all_of(active_cols)  
86 )  
87  
88 clean_gl <- gsub(":", "", gl_list[[1]])  
89  
90 list(  
91   id = row_data$person_id,  
92   glString = clean_gl  
93 )  
94 }
```

Loren — We may set you up on the research instance for these projects, just out of an abundance of caution. You haven't crashed our servers yet :) Just let us know when you're ready to proceed.

Thanks so much for making the code available for this pipeline, Hilary.

I'm going to pretty busy the next few weeks gearing up for the ASHI abstracts and the IHIW workshop among other things, but I'm still planning to submit some research proposals that would run as large jobs on PIRCHE servers, and we've been using our API key (rather than this one) from time to time.

External Sender. Be aware of links, attachments and requests.

Hi Hilary,

Thanks, it was great having you this year, and I really appreciated your work, and using my immunogenetr package!

I'll try to take a look at the API soon.

For the immunogenetr limitation, can you point me to what you did, or what part of the code to look into? I'm certainly happy that people are using it, and want to find and fix any bugs I can. In fact, opening an issue on github would probably be best.

Thanks,

Nick

Subject: [External] Informatics Workshop - Follow-up

Loren, Nick,

Excuse the delayed follow-up, we've had quite a bit to catch up on. I want to thank you for having me at the workshop. I would be interested in helping with future events, as an ASHI member, although I do have amazing support in Berlin.

Materials from the workshop are on our public repo:

<https://github.com/PIRCHE/pipeline/>

Folder: [2026 ASHI Clinical Informatics Workshop](#)

If you would like to play with the API immediately, go ahead and use this API key: **1471bafd62c-546d-4b61-82d1-fd5ad697be86**

I will inactivate this user in the coming weeks (currently marked for May 1st, but we're flexible). If either of you are interested in working on a project longterm, we can set you up with an account on our research instance.

Nick — There is one part in the code in which I had to 'trick' Immunogenetr into recognizing low res molecular typings. It was converting them to serology. I can't say that I had a lot of time to figure this out, so if you have ideas please go for it.

Thanks again!
